Demos and Slides

Agenda

- 1 Gamification basics
- 2 Three practical AI patterns
- 3 One combined app
- 4 How to build this in practice

Why Gamification Feels Shallow

Points feel meaningless

Badges no one cares about

Feedback feels generic

Difficulty feels random

PROGRESS

FEEDBACK

REWARD

CHALLENGE

AI gamification is practical now

Hosted AI

Generate
Classify

Browser AI

Adapt locally
Fast feedback

Smaller AI loops

One useful signal
One useful change

Don't overbuild.

What the AI does
with that signal

RESPONSE

How the UI
changes

Dynamic Content

Generate fresh prompts, facts,
or next-step variations
without a giant content system

VARIETY

REPLAYABILITY

LIGHTWEIGHT PERSONALIZATION

MINI DEMO 1 • DYNAMIC FACT REWARDS

Dynamic Fact Finder

Pick a place and a vibe. The app generates a short AI-powered fact, reveals a centered location snapshot after a couple of discoveries, and unlocks collectible postcards once the loop is rolling.

Pick the fact vibe

Map unlocked

Midnight Radar Echoes

Spooky Pin

Near Arlington’s busy corridor, 3441 N Fairfax Dr sits in a district where old roads, federal sites, and river fog have long fueled local ghost stories. After dark, the neighborhood feels a little too quiet for so much history.

PLACE

3441 N Fairfax Dr, Arlington, VA, 22201, USA

VIBE

Spooky

PROGRESS

Map snapshot unlocked. One more fact unlocks postcards.

Sentiment-Aware Feedback

React to tone and
choose a better feedback path

Tone Detection

Better Reinforcement

Smarter Follow-Up

Post-round checkpoint

MINI DEMO 2 • SENTIMENT ANALYSIS

Sentiment Snapshot

Share a quick reflection and get a tone-aware response that feels a little more thoughtful than the same generic message every time.

How did that round feel?

Example: I was frustrated at first, but I made it through.

Positive sample

Mixed sample

Frustrated sample

Response tone **Balanced**

Top read **0%**

Waiting

Your reflection will be summarized here.

Once you analyze a reflection, this area will give you a simple, user-facing read on the overall tone and the kind of response that fits it.

Tone mix

Positive

Neutral

Negative

Highlights

Analyze one reflection to see the standout lines.

SIGNAL
Player reflection
Sentence tone shifts

DECISION
Choose feedback route
Use confidence scores

RESPONSE
Tone changes
Recovery options change

```
const payload = {  
  kind: "SentimentAnalysis",  
  analysisInput: {  
    documents: [{ id: "1", language: "en", text }]  
  }  
};
```

Analyze the
reflection

```
const route = chooseRoute(doc);  
  
if (route.key === "negative") {  
  // protect progress, unlock support  
} else if (route.key === "mixed") {  
  // keep checkpoint, offer retry  
}
```

Adaptive Challenge Tuning

React to correctness, timing,
and repeated behavior
to keep challenge balanced

Behavior Signals Live Adjustment Better Pacing

MINI DEMO 3 · SMART DIFFICULTY

Adaptive Challenge

This quiz quietly adjusts its level based on how you are doing, so each round feels more responsive and less fixed. It is meant to feel polished and playable, not like a developer dashboard.

Status ● Smart pacing ready

Current **Easy**

Up next **Waiting...**

Accuracy **0%**

Best streak **3**

Easy

Round 0 of 8

Start a run to see the challenge adjust in real time.

Answer each question and the quiz will quietly tune what comes next.

Smart pacing is on

The next question will shift based on how this run is going, so the experience feels more tailored.

Start run
